## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STATE ASTM STANDARD

**CHMIRS:** The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 12/31/2001 has revealed that there are 4 CHMIRS sites within approximately 1.5 miles of the target property.

## EXECUTIVE SUMMARY

**CORTESE:** This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 22 Cortese sites within approximately 1.5 miles of the target property.

 Design Flow: 30 Million Gal/Day Baseline Flow: 20 Million Gal/Day  
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 Agency Type: Private  
 Waste Type: Process Waste (Waste produced as part of the industrial/manufacturing process) - Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards. Domestic Sewage - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
 Threat to Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.  
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Elapsed ASTM days:** Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

## **FEDERAL ASTM STANDARD RECORDS**

### **NPL: National Priority List**

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

**BRS:** Biennial Reporting System

Source: EPA/NTIS  
Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

## GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

SAMOA TOWN PLAN  
SAMOA  
SAMOA, CA 95564

### TARGET PROPERTY COORDINATES

Latitude (North):	40.816700 - 40° 49' 0.1"
Longitude (West):	124.190498 - 124° 11' 25.8"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	399596.5
UTM Y (Meters):	4518879.5
Elevation:	23 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 2440124-G2 EUREKA, CA  
General Topographic Gradient: General West  
Source: USGS 7.5 min quad index

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: DUNE LAND

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 6.00	Max: 0.00 Min: 0.00

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sand  
gravelly - coarse sand  
silty clay loam

Surficial Soil Types: fine sand  
gravelly - coarse sand  
silty clay loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: coarse sand  
fine sand  
stratified clay

### ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

## ADDITIONAL ENVIRONMENTAL RECORD SOURCES

### **FEDERAL WATER WELLS**

#### **PWS: Public Water Systems**

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### **PWS ENF: Public Water Systems Violation and Enforcement Data**

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### **USGS Water Wells: USGS National Water Inventory System (NWIS)**

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event Date: 11/24/1997

Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event Date: 11/24/1997

Event: Migration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event Date: 11/24/1997

Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

 Design Flow: 0 Million Gal/Day Baseline Flow: 0 Million Gal/Day  
 Facility Type: Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 Agency Type: Private  
 Waste Type: Domestic Sewage - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.  
 Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.  
 Reclamation: No reclamation requirements associated with this facility.

# Recreational User Survey Conducted for the Samoa Peninsula

### Introduction

The Samoa Peninsula is located northwest of Eureka and southwest of Arcata. It is bounded by Arcata and Humboldt Bays to the east and the Pacific Ocean to the west. The peninsula is fairly flat, with little rise or fall in elevation and few hills. The average elevation on the peninsula is 12 feet.

The Samoa Peninsula includes the communities of Samoa, Manila, Fairhaven, and Finntown. The main attractions along the Samoa Peninsula are the beaches and dunes. The dune habitat supports a diverse faunal assemblage, including small mammals and birds, carnivores, and reptiles. There are also numerous plant species present in the dunes, some of which are rare or endangered.

There are many types of recreational activities available in the area including OHV use, surfing, fishing, sightseeing, picnicking, wildlife viewing, horseback riding, nature study and beach combing. Many people visit the Samoa Peninsula to engage in bird watching. Numerous varieties of birds utilize the marshy area around the Peninsula permanently or as a stop over point in their migrations. The different varieties of birds include raptors, water birds, wading birds, songbirds, and shore birds.

### Survey Design

As part of the Samoa Town Master Plan EIR, a recreational user survey will be conducted. There are several recreation areas on the Samoa Peninsula. Following is a list and brief description of each area along the Peninsula to be included in the recreation survey. The areas are numbered for ease of reference.

#### **1. Manila Community Park**

Manila Community Park is located on the bay (east) side of Manila at the intersection of Lupin Drive and Peninsula Drive. The park features a playground, tennis courts, baseball field, basketball courts and trails through a freshwater marsh and to the edge of Humboldt Bay. There are restrooms and a parking lot at the park.

#### **2. Manila Dunes Recreation Area**

Located in Manila off State Route 255 on Peninsula Drive, this coastal dunes park features ocean beaches, dunes and coastal forest walks. There are restrooms and parking facilities located here. The recreation area is located adjacent to the Manila Community Center.

#### **3. Samoa Beach**

Samoa Beach is located directly across New Navy Base Road from Samoa, and can be accessed via the pedestrian underpass from Samoa. The parking area can be accessed from New Navy Base Road. Ocean access is obtained via a trail from the parking area.

#### **4. The “T”**

The “T” is a parking area located on the west side of New Navy Base Road, across from the Fairhaven Power plant (Bay Street). Beach access is available via a trail that is adjacent to the parking lot.

#### **5. Samoa Boat Launch County Park**

Samoa Boat Launch County Park is located five miles south of the Samoa Bridge on New Navy Base Road and features overnight camping, clamming, beachcombing and boat launching. Because of the close proximity to Samoa Dunes Recreation Area, OHV users commonly camp at the boat launch park and use the Recreation Area during the day. There are restroom and parking facilities available on site.

#### ***Samoa Dunes Recreation Area***

The Samoa Dunes Recreation Area (SDRA) is located at the southern tip of the Samoa peninsula. The Bureau of Land Management manages the 300-acre parcel as a multiple-use recreation site. Activities include bird watching, hiking, surfing, fishing, sightseeing, beachcombing, off-highway vehicle (OHV) use, picnicking, and scientific study of rare plants. Facilities available at this site include: restrooms, parking, picnic tables, and showers.

Because of the diversity of user types that utilize the SDRA, three different parking areas will be included in the survey.

#### **6. SDRA Picnic Area**

This area is accessed by turning left at the fork in Jetty Road at the entrance to the SDRA. There is a small grove of trees here in which there are several picnic tables and a restroom facility. There is convenient foot and vehicle bay access at this location.

#### **7. SDRA Jetty Parking**

This area is located to the west of the Picnic Area, and is accessed from the same road. The Jetty area is popular for walks along the sea wall, and is considered by locals to be the best surf spot on the Peninsula.

#### **8. SDRA OHV Staging Area**

This area is reached by turning right at the fork in Jetty Road at the entrance to the SDRA. This area is primarily used by OHV enthusiasts as a place to load and unload OHVs, and to park vehicles while riding in the beach and dunes. There are historical World War II ammunition bunkers located among the dunes in the vicinity of the OHV Staging Area. A lookout area from which to view the bunkers and the ocean is directly adjacent to the parking area.

This survey is being conducted to determine current use levels at these locations on the Samoa Peninsula.

## Procedures for Vehicle Counts/Observations

Vehicle counts/observations were conducted on 4 weekend days (two Saturdays and two Sundays), and 4 weekdays (one Monday, one Tuesday, one Wednesday, and one Thursday,) with a mix of weather conditions. Weather conditions were recorded on the survey form. Vehicle counts/observations were conducted at 8 (1-8 described above) parking areas, (see attached map for locations). Each of the parking areas was surveyed 3 times; on *at least* one weekday and one weekend day. Some areas were surveyed on two weekdays and one weekend day, some on two weekend days and one weekday. On each of the eight survey days, observations were recorded as follows:

On the first day between 8 and 8:30 a.m., the number of vehicles parked in each of the 8 parking areas were counted and recorded. At 8:30 a.m., the field person returned to parking area 1 and counted and recorded the number of vehicles. Between 8:30 and 9:30 a.m., the field person counted and recorded the number of persons in each car either arriving or leaving. The times the vehicle arrived and left the parking area were recorded. If a vehicle had not left by 9:30, it was indicated that the vehicle was still parked there. Also between 8:30 and 9:30 a.m., the number of persons entering the recreation area who did not arrive in a vehicle were counted and recorded.

Between Noon and 12:30 p.m. the number of vehicles parked in each of the 8 parking areas were again counted and recorded. At 12:30 p.m., the field person returned to parking area 4 and counted and recorded the number of vehicles. Between 12:30 and 1:30 p.m., the field person counted and recorded the number of persons in each car either arriving or leaving. The times the vehicle arrived and left the parking area were recorded. If a vehicle had not left by 12:30, it was indicated that the vehicle was still parked there.

Between 4 and 4:30 p.m., the number of vehicles parked in each of the 8 parking area were again counted and recorded. At 4:30, the field person returned to parking area 3. Between 4:30 and 5:30 p.m. the field person counted and recorded the number of vehicles. The times the vehicles arrived and left the parking area were recorded. If a vehicle had not left by 5:30 p.m., it was indicated that the vehicle was still parked there. Also, between 4:30 and 5:30 p.m. the number of persons entering the area who did not arrive in a vehicle were counted and recorded.

Each day this procedure was repeated. On day 2 (weekday), parking area 8 at 8:30 a.m., parking area 1 at 12:30 p.m., and parking area 2 at 4:30 p.m. On day 3 (weekend), parking area 3 - 8:30 a.m., parking area 5 - 12:30, and parking area 1 - 4:30 p.m. On day 4 (weekend), parking area 4- 8:30 a.m., parking area 3 - 12:30 p.m., and parking area 6 - 4:30 p.m. On day 5 (weekday), parking area 7- 8:30 a.m., parking area 2 - 12:30 p.m., and parking area 5 - 4:30 p.m. On day 6 (weekday), parking area 6- 8:30 a.m., parking area 7 - 12:30 p.m., and parking area 8 - 4:30 p.m. On day 7 (weekend), parking area 5- 8:30 a.m., parking area 6 - 12:30 p.m., and parking area 4 - 4:30 p.m. On day 8 (weekend), parking area 2- 8:30 a.m., parking area 8 - 12:30 p.m., and parking area 7 - 4:30 p.m. A visual representation of the times of day and dates that each area was surveyed is below. Bold numbers are weekend dates.
